

We designed information architecture to provide single version truth to facilitate innovation and address the changing view of the business contexts. Our solution entailed the following advantages that helped the client to enhance data efficiency:

- The solution deployed improved the efficiency by eliminating redundancy of data, provided standardization and reuse of components.
- The solution provided transparent information across channels with consistency and accuracy.
- The solution eliminated lack of trusted information and provided agility to the enterprise.

Business Needs / Issues:

- Existing data from the CORE system (SAP) to be reused.
- Project to be delivered on time and within the Budget.
- Ad-hoc and On-demand reporting facility needed.
- Accuracy of the reports required.

Benefits:

- Planning and Definition of Overall DW Roadmap.
- Source Systems Analysis of the existing data feeds from SAP.
- Data Profiling and Cleansing.
- Data Warehouse Design, Data Modeling.
- ETL Strategy, Job definition and development.
- Design and implementation of various user reports to query the data mart / warehouse.
- Business As Usual reports ran on Day 1 of Go-Live.
- Project delivered within Cost, Budget and Effort estimates.
- Reports that earlier ran for many hours ran under 3 minutes
- Customer said “ ... reports matched to the last dollar...”
