

We designed and implemented a reporting system while supporting the existing analytical systems providing the client the secured data access vis-à-vis insights to focus on right customers. Our solution entailed the following advantages:

- The solution enabled the client to handle business metadata and share them across users.
- The solution aligns the efforts of IT with the goals of the business.
- Provided business context to information technology assets.
- The solution established responsibility and accountability.

**Business Needs / Issues:**

- Troubleshooting issues with the existing system
- Supporting existing analytical reporting system for Budget and Forecast
- Enhancements and implementation of new reporting models
- Region-wise reporting administration
- Design and develop data flow mechanism for the exported Budget and Forecast data with conversions and consolidations to the reporting system
- Design and develop Catalogs, Models, Reports for various business scenario
- Automate data flow and report refresh

**Benefits:**

- We integrated and provided client a consolidated view of critical data in single window for analytical purposes.
- The solution enabled the client to focus on right customer.
- The solution provided secured data to the users.
